

## **TRENDS!**

### Giant Chinese drone-carrying AI ship enters service as research vessel

It can carry and operate dozens of unmanned aerial, surface and underwater vehicles (UAVs, USVs and UUVs) simultaneously to monitor its surroundings and produce a data hub.

### Japanese Fighters Intercept China's High-Flying WZ-7 Drone For First Time

China's diamond-wing WZ-7 Soaring Dragon drones have suddenly expanded their operations, which is likely a sign of what's to come.

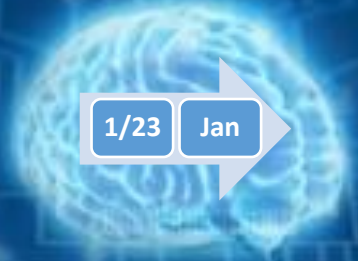

### Chinese scientists develop laser-powered drone to stay aloft 'forever'

System uses laser beam to power optics-driven drone remotely by converting light energy into electricity.

## MUST READ! - CHINA-Special

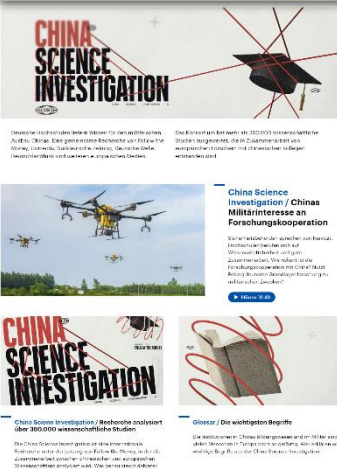

### The First Battle of the Next War

A war games simulation of a full-scale Chinese invasion of the self-governing island nation of Taiwan predicts “heavy losses” for all parties likely to be involved, including the U.S. and Japan...

### Chinas Militärinteresse an Forschungskooperation

Sicherheitsbehörden sprechen von Naivität. Hochschulen berufen sich auf Wissenschaftsfreiheit und gute Zusammenarbeit. Wie riskant ist die Forschungskooperation mit China? Nutzt Peking deutsche Grundlagenforschung zu militärischen Zwecken?
