T-650 heavy lift UAV for rescue operations

BAE Systems has unveiled the T-650, an all-electric "heavy lift" Unmanned Air System (UAS), marking a breakthrough in rescue technology.

HUUVER – a hybrid UAV-UGV drone

A consortium of 7 partners from the EU has successfully completed the concept of a hybrid UAV-UGV drone. It combines the most useful and necessary features of a flying drone with a riding drone.

Future soldier resupply could rely on AI-powered logistics, robo-boats

Soldiers in the coming years may use AI to predict when and how to resupply troops and rely on swarms of automated watercraft and drones to get those supplies to personnel spread across vast distances.
