ENABLING AN INSIDE VIEW INTO THE URBAN ENVIRONMENT

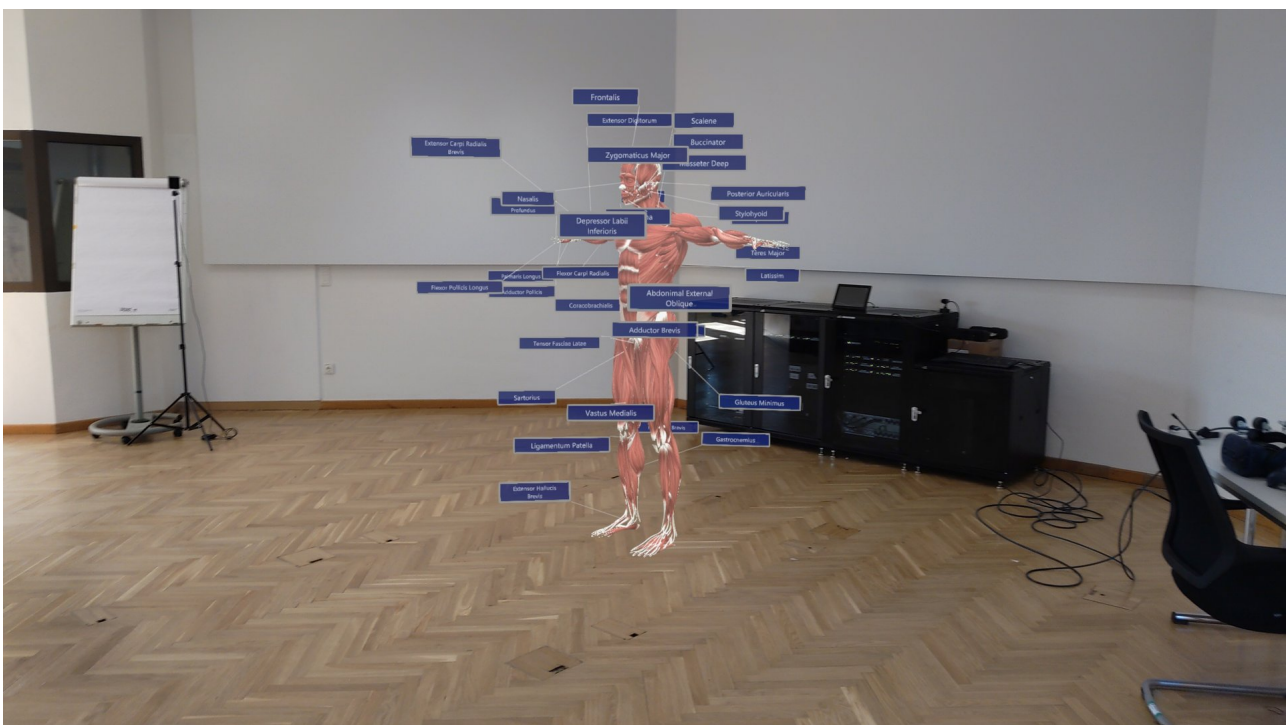

The S³OMT [Triple-S] Operations Mission Tool is a key resource in mission planning within urban environments. It enables an inside view into the environment on all three levels of movement thereby improving our spatial understanding.

INITIAL OPERATIONAL CAPABILITY OF LECTURE ROOM 21

After several months of intensive construction works, the Lecture Room 21 [HORVATH] in our Institute for Advanced Officer Training not only took shape but reached also the Initial Operational Capability with the implementation of the widescreen visualization along with 4 Virtual Reality and 4 Hologram Googles offering a wide range of possibilities. In the next weeks extensive tests within an staff officer training environment will take place to improve training on the one hand and develop solutions for operational staff work on the other hand.
